

AIATrust **DBIA session: The Case for Robust Teaming Agreements**

Thank you for viewing the AIA Trust Week webinar presented by our guest panel of architects from Design-Build Institute of America (DBIA). Please answer the following questions and submit your completed test to aiatrust@aia.org to receive 1.5 AIA learning units.

1. True or False? Once considered an “alternative” form of project delivery, design-build is now the fastest growing and most commonly used project delivery system. Nearly half of all design and construction projects in the United States are being delivered using some form of design-build.
2. True or False? DBIA’s advocacy and outreach professionals strive to provide the resources you need to craft effective project delivery legislation.
3. True or False? During the team selection phase, the architect will typically choose the firms that will make up their design-build team.
4. True or False? Design-build teams often includes the builder, architect, and engineers.
5. Since a design-build team has several professionals, which one will usually be project-leader?
 - a. The Architect
 - b. The Engineer
 - c. The General Contractor
 - d. The Construction Manager
6. What is the project leader responsible for
 - a. Acts as the primary point of contact with the owner
 - b. Overall project success
 - c. Project budget and schedule
 - d. All of the above
7. True or False? All team members are involved in the design process early on to identify potential issues and optimize the project.
8. True or False? The designer is ultimately responsible to design to the established professional standard of care.
9. Which of the following groups are represented by the DBIA community?
 - a. Architects and Engineers
 - b. Contractors and other construction professionals
 - c. Owners
 - d. All of the above
10. True or False? The panelists focused solely on the role the architect plays in working on design-build teams.
